

The awareness and importance of water saving and conservation has increased in recent decades. Many countries promote sustainable water consumption and propose measures for rational water use.

**KASSEL SANITÄR**, aware of these needs, offers efficient solutions for sanitary products: water and energy saving with no impact to user comfort, well designed and high quality products,

Based on infrared sensor technology (Free Contact) or piezoelectric (Touch), Kassel products suit the needs of industries like health centers, hospitals, hotels, shopping centers, restaurants, airports, gyms and offices, among others. Offering a wide range of solutions for sinks, toilets, urinals and showers, specially designed to accommodate locations where hygiene requirements, savings, convenience and safety are highly important. Kassel also develops products for the residential sector, combining new technologies and providing the user a sense of comfort and elegance without neglecting saving and rational use of water and energy.

All Kassel products are specially designed to help save and conserve our most precious resource: water.

## Why Electronic Faucets?

Conserve Water Unlike manually operated faucets that are often left running or partially turned off, electronic faucets switch off automatically after use. This ensures water conservation and savings on additional water expense. Improve Hygiene In public facilities with many different users, "no touch" activation reduces the spreading of germs and increases ambient cleanliness. Vandal proof Some people enjoy "testing" the durability of manual handles. Handles are especially vulnerable to all kinds of abuse. Over a period of time this causes premature handle failure which leads to costly repairs. Electronic flushing systems and faucets have no handles and are free of handle-related vandalism, problems or repairs. All Kassel products are made of solid brass with some products of one-piece body designs.
